Automated Employee Attendance System

A lightweight application which can be used by small factories and institute for tracking and monitoring the employees attendance. It uses computer vision techniques to achieve the feature.

Features:

1. The System will log the in and out time of the workers.
2. Admin can quickly get monthly attendance report for all workers.
3. Keep Track of work vs time and hence increase efficiency & productivity.
4. It can also record unknown person entering the premises.
